

Table of contents

Foreword	XI
----------	----

■ CHAPTER 1

Introduction to medical physics	1
--	----------

1.1	Why physics?	1
1.2	Units of measurement, constants and physical quantities	1
1.3	Mechanics in general	3
1.4	Kinematics	5
1.5	Newton's laws (translational dynamics)	9
1.6	The force of gravity	9
1.7	Work, power, energy and kinetic energy	10
1.8	Conservative forces and potential energy	11
1.9	Energy conservation	12
1.10	Elastic force	13
1.11	Friction force	14

■ CHAPTER 2

Biomechanics	18
---------------------	-----------

2.1	Introduction: muscles and bones	18
2.2	Torque	18
2.3	Rigid body equilibrium	18
2.4	Center of mass and center of gravity	19
2.5	Constraints and levers	20
2.6	Mechanical equilibrium applied to body joints 	22
	2.6.1 Levers in human body	22
	2.6.2 Hip joint equilibrium	24
2.7	Rotational dynamics	27
2.8	Deformations	30
2.9	Deformations of bones 	31

■ CHAPTER 3

Fluid mechanics 34

- 3.1 Introduction: the cardiovascular system  34
- 3.2 Density, pressure and flow rate 35
- 3.3 Hydrostatic pressure and buoyancy 36
- 3.4 Liquid flow and continuity equation 39
- 3.5 Energy conservation: Bernoulli's theorem 39
- 3.6 Laminar flow of viscous fluids 42
- 3.7 Turbulent flow 45
- 3.8 Vascular flow  45
 - 3.8.1 Blood flow rate and velocity 45
 - 3.8.2 Aneurysm and stenosis 48
- 3.9 Blood viscosity  48
- 3.10 Blood pressure and resistance of vessels  50
- 3.11 Effects of hydrostatic pressure  53

■ CHAPTER 4

Distensibility and pulsation 54

- 4.1 Introduction: heartbeats 54
- 4.2 Cohesion forces and surface tension 54
- 4.3 Air embolism, flotation, surfactant liquids  57
 - 4.3.1 Air embolism 57
 - 4.3.2 Flotation 58
 - 4.3.3 Surfactants 58
- 4.4 Membrane elastic tension and Laplace formula 59
- 4.5 The heart  61
- 4.6 Cardiac work and Laplace formula  65
- 4.7 Equilibrium radius of vessels  68
- 4.8 Hydrodynamic effects of vessel distensibility  70
- 4.9 Blood pressure measurements  73
- 4.10 Pulsatile motion and mechanical impedance  74

■ CHAPTER 5

Gases and thermodynamics 79

- 5.1 Introduction: respiration and metabolism 79
- 5.2 Temperature and heat 79

5.3	Macrostates and microstates	82
5.4	Work and transformations in thermodynamics	82
5.5	Ideal gases	84
5.6	Real gases	86
5.7	Air composition and respiration 	87
5.8	Kinetic theory of gases	88
5.9	Energy conservation: 1st law of thermodynamics	91
5.10	Enthalpy	92
5.11	Metabolism and spirometry 	93
5.12	2nd law of thermodynamics and entropy	97
5.13	Free energy	102
5.14	Free energy, entropy and life 	103
5.15	Heat transmission	104
	5.15.1 Conduction	105
	5.15.2 Convection	106
	5.15.3 Thermal radiation	106
	5.15.4 Evaporation	109
5.16	Thermoregulation 	109
	5.16.1 Cold environment	110
	5.16.2 Hot environment	111
	5.16.3 Very dry or very humid environments	111

■ CHAPTER 6

Passive transport: diffusion, filtration, osmosis 113

6.1	Introduction: exchange of molecules through biological membranes	113
6.2	Heat diffusion	114
6.3	Biological membranes 	117
6.4	Free diffusion	119
6.5	Diffusion through membranes	121
6.6	Filtration	126
6.7	Gas diffusion in biological systems 	127
6.8	Osmosis and osmotic pressure	129
6.9	Osmotic work and osmotic potential	131
6.10	Isotonic concentration and osmotic balances 	132
6.11	Capillary membrane and microcirculation 	133
6.12	Pulmonary, digestive and kidney membranes 	135
	6.12.1 Pulmonary capillaries	135
	6.12.2 Intestinal capillaries	135
	6.12.3 Kidney membranes	136

■ CHAPTER 7

Electric phenomena

139

7.1	Introduction: electric phenomena in biological systems	139
7.2	Electric charge and Coulomb force	139
7.3	Electric field and potential energy	141
7.4	Gauss's law	144
7.5	Electric dipole and dipole layer	145
7.6	Electrical capacitance and capacitors	147
7.7	Electric current and Ohm's laws	148
7.8	Electrolytic solutions and mobility	149
7.9	Direct current circuits and Joule heating effect	152
7.10	Capacitor charging and discharging	154
7.11	Electrochemical flows and balances 	156
	7.11.1 Electrochemical flows	156
	7.11.2 Nernst equation	158
7.12	Capillary and cell membranes 	159
	7.12.1 Capillary membrane	159
	7.12.2 Oncotic pressure	160
	7.12.3 Cell membranes and membrane potential	161
	7.12.4 Flow in out-of-equilibrium conditions and active transport	162
7.13	Action potentials 	163
7.14	Action potential propagation 	166
	7.14.1 Axon characteristics and action potential propagation	166
	7.14.2 Myelinated fibers	171
7.15	Bioelectric activities (ECG, EEG, EMG) 	173
7.16	Physiological explanation of the actions mentioned in the introduction 	177

■ CHAPTER 8

Waves and acoustics

179

8.1	Introduction: waves in nature and hearing	179
8.2	Description of waves	179
8.3	Harmonic waves	180
8.4	Wave propagation	184
8.5	Wave reflection and refraction	186
8.6	Wave interference	188
	8.6.1 Standing waves	189
	8.6.2 Beats	191
8.7	Wave polarization	192
8.8	Doppler effect	192

8.9	Sound waves, infrasounds and ultrasounds	194
	8.9.1 Sound waves	194
	8.9.2 Sound wave velocity and intensity	195
	8.9.3 Sound frequency spectrum	196
8.10	Sound sensation and the ear 	197
	8.10.1 Sound sensation	197
	8.10.2 Ear and sound transmission	200
8.11	Stethoscope and body sounds 	203
8.12	Ultrasound in medicine (diagnostic and therapy) 	204
	8.12.1 Doppler flowmetry	204
	8.12.2 Therapy	205

■ CHAPTER 9

Magnetism and electromagnetic radiations 208

9.1	Introduction: electromagnetic radiation in medicine	208
9.2	Magnetic fields	208
9.3	Lorentz force	210
9.4	Moments, solenoids and magnetic fields in matter	210
9.5	Ampère's law	212
9.6	Magnetic flux, induction and self-induction	214
9.7	Alternating current circuits	216
9.8	Electromagnetic waves	221
9.9	Electromagnetic waves: spectrum, emission and absorption	223
9.10	Electromagnetic waves in medicine 	225
9.11	X-ray production 	229
9.12	X-ray absorption 	232
9.13	X-ray imaging 	235
9.14	Computed tomography (CT) scan 	240

■ CHAPTER 10

Optics 243

10.1	Introduction: light and vision	243
10.2	Light wave propagation	244
	10.2.1 Optical fibers	246
10.3	Light diffraction	246
10.4	Light dispersion	248
10.5	Light absorption	251
	10.5.1 Spectrophotometry 	251
10.6	Light polarization	253
	10.6.1 Light polarization and molecules optical rotatory power 	256

10.7	Coherent light	257
10.8	Optical interfaces, lens and optical aberrations	258
	10.8.1 Spherical optical interface (diopter)	258
	10.8.2 Thin lenses	262
	10.8.3 Optical aberrations	266
10.9	The microscope 	268
	10.9.1 Resolving power of a microscope	269
	10.9.2 Special optical microscopes	272
10.10	The eye: sight 	273
	10.10.1 Eye's anatomy	274
	10.10.2 The eye as an optical system	274
	10.10.3 Visual acuity	276
	10.10.4 Eye refractive errors	278
10.11	The eye: vision 	279
	10.11.1 The retina	279
	10.11.2 The mechanism of vision	280
	10.11.3 Color triangle and color vision	284

■ CHAPTER 11

Ionizing radiation 286

11.1	Introduction: environmental radiation	286
11.2	Atomic and nuclear structures	286
	11.2.1 Atoms	286
	11.2.2 Molecular structures	291
	11.2.3 Nuclei	293
11.3	Ionizing radiation	296
11.4	Radioactive decay	296
	11.4.1 Radionuclides and radioactivity	296
	11.4.2 Radioactive decay	298
11.5	Effects of ionizing radiations on biological system 	300
11.6	Diagnostic applications in medicine 	307
	11.6.1 Bone Mineral Densitometry (BMD)	307
	11.6.2 Diagnostics with radionuclides	308
	11.6.3 SPECT and PET imaging	310
11.7	Therapeutic applications in medicine (radiotherapy) 	313

■ CHAPTER 12

Physics and technology in medical instrumentation 319

12.1	Introduction	319
12.2	Computers in medicine 	320
	12.2.1 Artificial Intelligence (AI) in medicine	320

12.2.2 The GRID	321
12.2.3 Robotic surgery	321
12.3 Centrifugation 	322
12.3.1 Basic physics of centrifugation	322
12.3.2 The centrifuge	324
12.3.3 Preparative and analytical centrifugation	325
12.3.4 Other transport systems: sedimentation and electrophoresis	327
12.4 The electron microscope 	329
12.5 Electrocardiography 	332
12.5.1 The dipolar model and the total dipole moment of the heart	333
12.5.2 Electrocardiographic leads	335
12.5.3 Precordial leads and dipolar layer model	336
12.5.4 Technical details	338
12.6 Pacemakers and defibrillators 	339
12.7 Ultrasound imaging 	342
12.7.1 Ultrasonic vibrations and their propagation	342
12.7.2 Technical characteristics of ultrasound imaging	344
12.7.3 Signal processing, ultrasound analysis and dynamic echocardiography	346
12.8 Non-invasive measurement of aortic flow (impedance plethysmography) 	350
12.8.1 Thoracic electrical bioimpedance	350
12.8.2 Aortic flow measurement	352
12.9 The artificial kidney (hemodialysis) 	355
12.9.1 Diffusion in time	356
12.9.2 Artificial kidney device	358
12.9.3 Hemodialysis time	360
12.10 Magnetic resonance imaging 	362
12.10.1 Magnetic resonance: fundamentals	362
12.10.2 Magnetic resonance imaging	363
12.10.3 Magnetic resonance: technical details	367
12.11 Special imaging developments 	368
12.11.1 Fast CT	368
12.11.2 ^3He and ^{129}Xe MR	369
12.11.3 Optical Coherence Tomography (OCT)	370
12.12 Main radiotherapy developments 	371
12.12.1 Stereotactic radiosurgery (gamma knife)	371
12.12.2 Robotic radiation surgery: cyberknife	372
12.12.3 Tomo-radiotherapy	373
12.12.4 Hadron therapy	374
12.12.5 Hadron therapy centers in the world	379
12.12.6 Boron Neutron Capture Therapy (BNCT)	380
12.12.7 Final remarks	381
Index	383
Authors	388
